

# SABARISH RAJA RAMESH RAJA

Chicago, IL | 872-899-0544 | sabarishds03@gmail.com | LinkedIn | Portfolio | Github

## Summary

Data analyst and AI/ML engineer with hands-on experience building analytics pipelines, KPI dashboards, and agentic AI systems. MS in Computer Science, IIT Chicago (GPA 3.8) — with a track record of shipping end-to-end AI products from prompt engineering and multi-model orchestration to production deployment.

## SKILLS

**Languages:** Python, SQL, JavaScript, C++, R

**AI / ML:** LangChain, LangGraph, Multi-Agent Systems, RAG, NLP, Transformers, PyTorch, TensorFlow, Scikit-learn, Hugging Face, Prompt Engineering

**Backend:** Supabase, Node.js, Express, MongoDB, Docker, n8n, REST APIs, Vector Embeddings

**Data & Analytics:** Google Analytics 4, Power BI, Tableau, Looker Studio, BigQuery, Statistical Analysis

**Mobile / Frontend:** React Native (Expo), React, EAS Build, CI/CD, GitHub Actions

## EXPERIENCE

**SEO & Data Intern – SubjectToClimate (Remote, Chicago)** **Oct 2025 - Present**

- Designed automated KPI dashboard using Supermetrics and GA4 tracking 20+ metrics across 8 state hub dashboards, reducing manual reporting time by 75% and eliminating 10+ hours/week of data extraction.
- Built an n8n workflow that fetches daily climate news across 4 grade bands, uses an LLM to score climate relevance and auto-assign content categories, then publishes approved articles to the CMS while routing low-confidence results to the content team via Slack.
- Engineered an AI analytics platform unifying GA4, GSC, FullStory, and Meilisearch into a Supabase warehouse — enabling natural-language querying via Claude API with automated SQL generation and query optimization across multi-million-row tables.

## PROJECTS

**StyleSense – AI Wardrobe & Outfit Planner** **Mar 2025 - Present**

- Solo-engineered a production-grade React Native app with Supabase backend, distributed as a standalone Android APK via EAS Build — integrating multi-model Claude API (Sonnet 4.5 vision + Haiku 4.5 chat) for clothing classification and conversational outfit generation.
- Built a multi-stage outfit pipeline: natural language input → Postgres filtering by formality/season → Claude Sonnet 4.5 visual reasoning over wardrobe images → 3 ranked outfit combinations with gap analysis and affiliate shopping links.
- Implemented voice input via Expo AV + OpenAI Whisper, weather-aware prompt augmentation via Open-Meteo GPS, and production observability with PostHog + Sentry across 12+ instrumented events.

**AI-Powered Online Bookstore Platform** **Sep 2025 - Nov 2025**

- Architected a full-stack LLM agentic platform using LangGraph and GPT-4 Vision that resolved 70%+ of customer support and fraud cases autonomously.
- Designed semantic search system using vector embeddings to improve book discovery; implemented JWT-secured RESTful APIs and admin dashboard with real-time analytics for AI-driven case management.

## EDUCATION

**Illinois Institute of Technology, Chicago, IL** **May 2026**

Master of Science, Computer Science, GPA 3.8

Relevant Coursework: Machine Learning, Advanced Database Organization, Medical Informatics & AI

## RESEARCH

**A Scalable Ensemble Learning with Performance Evaluation for Credit Card Fraud Detection** **Jan 2025**

- Built an ensemble model (Isolation Forest + XGBoost + SVM) achieving 97.0% Precision-Recall and 96.3% ROC-AUC on a highly imbalanced fraud dataset using ADASYN and NearMiss resampling techniques.
- Published findings in AIP Conference Proceedings, presented at ICRAIC 2024.
